

# Case Study: Radiculopathy

Vickie's Story

I had been suffering from neck pain for a number of weeks, but this time it was different; I was having headaches and numbness down my arm and into my fingers. At one point, I had a headache that lasted for 9 days straight! I stumbled across Thrive on Groupon and decided to give it a try.

My initial visit was different than Chiropractors I had seen in the past. None of my other Chiropractors ever took x-rays of my spine, and none of them ever asked me what I wanted to achieve as a personal health goal. The Doctor took plenty of time to explain to me why this was happening, because bones will change shape if there is too much pressure on them, and the shape of my neck was causing the bone spur to form. The Doctor suggested a plan of action to stop the degeneration and start healing. I began treatment that same day.

In just a few short months I have gone from having a literal constant headache and missing work for extended periods of time, to being almost completely pain free (no numbness, no headaches!). Thank you Thrive!

## Complaints

- Neck Pain
- Numbness/Tingling
- Headaches

## Solution

- Chiropractic Care
- Spinal Decompression
- CBP Protocol

## Results

- Pain Free
- No Numbness
- Back To Living!

## Doctor's Story

Vickie had seen several other chiropractors over the years, and she still had pain. After her initial exam and x-rays, we determined that she had severe degeneration. Vickie explained she had had this issue for decades on and off, but it always resolved with a small amount of treatment so she never connected that it was a recurring problem. She was never treated consistently with correction in mind because no other chiropractors had done any imaging of her spine.

We agreed on a corrective care plan, and got to work. Consistency has been a challenge because Vickie works as a flight attendant and travels constantly. Despite the challenge, Vickie resolved 100% of her presenting symptoms. She no longer has headaches, and has not had neck pain or arm numbness for several months. Her most recent x-rays show a relative 202% improvement in her spinal curvature (7.6 degrees to 23.0 degrees), and is still improving.

Every Patient Is Different. This Is Not A Guarantee Of Results. You may get better or worse results depending on a variety of variables.
